

We want the best for our babies

Your baby is discovering the world...
but did you know the skills s/he builds
will impact motor and early learning for a lifetime?

PROBLEM: Placing your baby in a walker (or exer-saucer) hinders the natural progression of movement, increases delays, creates muscle imbalances in the growing spine, and sets up the stage for cumulative back injury.

SOLUTION: I created and patented a device which ensures healthy motor skill development, AND... since the brain develops critically in the first year, the best thinking skills.

Baby learns as s/he plays!

Best 4 Baby

1. Safeguards baby's vital, growing spine.
2. Develops healthy patterns of movement
3. Enriches thinking skills through early learning play
4. Responds to & grows with your baby's body & mind!
